Guidelines For Shipping, Handling, Storage & Recycling of Your Inspired Energy Lithium Ion Battery

**Shipping**

Shipping regulations are categorized based on:

1. The method by which the batteries are to be shipped
2. The items that are to be shipped with the batteries
3. The materials used in the cell construction
4. The product type: Individual cell or assembled battery pack
5. The energy-rating of the cell or battery pack
6. The level of testing that has been undertaken

There are many different categories, each with differing regulations, so it is important to know which category applies when shipping your Inspired Energy battery packs.

† All commercially available Inspired Energy, Li Ion battery packs have been tested and comply with the UN Manual of Tests and Criteria part III subsection 38.3 (ST/SG/AC.10/11/Rev.5) - more commonly known as UN 38.3. A copy of the compliance certificate may be downloaded from the shipping page on our website.

† All Inspired Energy standard Li Ion battery packs are between 2.7Watt hours and 100Watt hours.
† All Inspired Energy standard Li Ion battery packs contain less than 8g of equivalent Lithium.
† Inspired Energy does not sell Lithium metal products of any type.
† Inspired Energy does not sell individual cells of any type.

Inspired Energy standard Li Ion batteries can be shipped nationally and internationally, however there are very specific requirements regarding packaging & documentation.
IATA Packing Instructions for air shipping:

These packing instructions pertain to International air transport, they have been adopted by the major courier services for transportation by all modes, and are the standard for domestic US and international air shipping. Lithium Ion batteries shipping internationally from Inspired Energy are packaged in accordance with the IATA Packing Instruction 965. If you re-ship our products on their own, the same procedure must be followed.

- If you ship Inspired Energy batteries internationally with your device, you must follow IATA P.I. 966.
- If you ship Inspired Energy batteries internationally installed in your device you must follow IATA P.I. 967.

To avoid confusion when reviewing IATA packaging instructions, we recommend that you also review the IATA Guidance Document on Transportation of Lithium Batteries.

If you need to demonstrate that your battery is between 2.7Wh and 100wh, please refer to the product page at www.inspiredenergy.com - The watt-hour rating is listed in the specification summary. Alternatively, it can be calculated as follows:

\[
\text{Rated battery capacity (Ah) } \times \text{ nominal battery voltage (V)} = \text{Energy in Watt-hours (Wh)}
\]

If you need to demonstrate that your Inspired Energy battery has been tested to UN38.3, A copy of the compliance certificate may be downloaded from the shipping page on our website.

Transportation Regulations for Lithium Ion Batteries

The international regulations covering the transport of rechargeable lithium ion batteries are the:

- UN Recommendations on the Transport of Dangerous Goods Model Regulations
- UN Recommendations on the Transport of Dangerous Goods Manual of Tests and Criteria
- US Federal Register, Dept. of Transport, Pipeline & Hazardous Materials Safety Administration, 49CFR
- ICAO (International Civil Aviation Organization) Technical Instructions
- IATA (International Air Transport Association) Dangerous Goods Regulations

These shipping regulations apply to everyone shipping a lithium ion battery: cell manufacturers, battery assemblers, distributors, OEMs, retail establishments & end users. Fines have been established for non-conformance.

For additional shipping safety, from April 2016 Lithium Ion battery packs shipped under IATA Packing instruction 965 must be charged no more than 30% of their rated capacity. (30% State of Charge) All Inspired Energy products are charged to 30% S.o.C. immediately prior to shipping. This maximizes your warehousing or holding period whilst minimizing the amount of stored energy being transported. If you ship Inspired Energy Lithium Ion batteries & wish to recharge them to 30% S.o.C. we have special chargers that can do this.

Commercial Air travel with Inspired Energy Li ion battery packs

Inspired Energy Li ion battery packs may not be packed in your checked luggage. They must be carried with you in your carry-on bag. Inspired Energy has dust caps available which may be used to provide isolation of the battery terminals during transport if required. For current regulations & advice on how many batteries you may travel with, we recommend you consult

http://safetravel.dot.gov
Use the following tables to determine the appropriate packing & regulations & personnel certification that will apply to your shipment.

Guidelines For Shipping, Handling, Storage & Recycling of Your Inspired Energy Lithium Ion Battery

Notes

For air shipping:
- Don’t forget to check for any Operator Variations that FedEx, UPS, DHL etc. and individual airlines may also implement which are over & above the IATA requirements shown here. You’ll find them in a separate section of the IATA Dangerous Goods Handbook.
- Domestic US & international shipments have the same regulations.
- The only Inspired Energy products shipped as fully regulated class 9 dangerous goods under section IA, are new, untested battery packs en-route to the test facility to undergo testing.
- If your shipper allows it (See Operator Variations) you may replace the Shipper’s declaration with an alternate document. (Most shippers do not allow this)
- If you intend to re-use the packaging in which you received the battery packs, then you must replace our Lithium Handling label with your own, and you must assess the packaging to ensure that it remains in sufficiently good condition to be re-used.
- Batteries must be 30% SoC or below.

For ground shipping:
- No Dangerous Goods documents are required to ship any Inspired Energy standard Lithium Ion Battery as they all qualify as SMALL Lithium Ion Batteries & therefore are exempt from this requirement.

(i) Air Shipping Boxes containing 3 or more Inspired Energy battery packs

Minimum box size to fit all the paperwork = 9” long x 8” wide x 7” tall

UN3480. IATA Packing Instruction 965 Section IB; Regulated Class 9 Dangerous Goods, Lithium Ion Batteries

The shipper must be IATA dangerous goods certified.

Bulk packaged battery packs shipped internationally from Inspired Energy will be shipped like this.

Note the distinction between “regulated” and “FULLY regulated” products:

Shipments of 3 or more Inspired Energy Li ion battery packs in the same box are shipped as regulated class 9 dangerous goods under section IB.

If you intend to re-use the packaging in which you received the battery packs, then you must replace our Lithium Handling label with your own, and you must assess the packaging to ensure that it remains in sufficiently good condition to be re-used.
(ii) Air Shipping Boxes containing 1 or 2 Inspired Energy battery packs

**UN3480. IATA Packing Instruction 965 Section II; Excepted Lithium Ion Batteries**

The shipper must be adequately trained.

If you intend to re-use the packaging in which you received the battery packs, then you must replace our Lithium Handling label with your own, and you must assess the packaging to ensure that it remains in sufficiently good condition to be re-used.

You cannot ship multiple boxes each containing only 2 batteries to avoid the requirements of IATA PI965 section IB.

(iii) Air Shipping Boxes containing up to 5kg of Inspired Energy battery packs packaged with equipment

**UN3481. IATA Packing Instruction 966 Section II; Excepted Lithium Ion Batteries**

The shipper must be adequately trained.

If you intend to re-use the packaging in which you received the battery packs, then you must replace our Lithium Handling label with your own, and you must assess the packaging to ensure that it remains in sufficiently good condition to be re-used.
(iv) Air Shipping Boxes containing 3 or more Inspired Energy battery packs packaged IN equipment

UN3481. IATA Packing Instruction 967 Section II; Excepted Lithium Ion Batteries
The shipper must be adequately trained

If you intend to re-use the packaging in which you received the battery packs, then you must replace our Lithium Handling label with your own, and you must assess the packaging to ensure that it remains in sufficiently good condition to be re-used.

(v) Air Shipping Boxes containing 1 or 2 Inspired Energy battery packs packaged IN equipment

UN3481. IATA Packing Instruction 967 Section II; Excepted Lithium Ion Batteries
The shipper must be adequately trained

If you intend to re-use the packaging in which you received the battery packs, then you must assess the packaging to ensure that it remains in sufficiently good condition to be re-used.
Ground shipping Inspired Energy Li Ion battery packs:

Battery packs on their own, up to 30kg/66lb per box.  
(UN3480 Excepted Small Lithium Ion Batteries)

Or,

Battery packs WITH Equipment
(UN3481 Excepted Small Lithium Ion Batteries - no weight or quantity limit)

Or,

3 or more Battery battery packs IN Equipment.  
(UN3481 Excepted Small Lithium Ion Batteries)

Special Packing Note

 couriers bar code label 8.5"x6" minimum

 Customs Invoices  
(if used. Multiple copies in a ziplock bag)  
9"x7" minimum

↓ No Dangerous Goods Paperwork is required
↓ If you intend to re-use the packaging in which you received the battery packs, then you must replace our Lithium Handling label with your own, and you must assess the packaging to ensure that it remains in sufficiently good condition to be re-used.

Ground Shipping up to 2 Inspired Energy Li Ion battery packs IN Equipment.  
UN3481 Excepted Small Lithium Ion Batteries

 couriers bar code label 8.5"x6" minimum

 Customs Invoices  
(if used. Multiple copies in a ziplock bag)  
9"x7" minimum

↓ No Dangerous Goods Paperwork is required
↓ If you intend to re-use the packaging in which you received the battery packs, then you must assess the packaging to ensure that it remains in sufficiently good condition to be re-used.

<td></td>
<td>• Inspired Energy batteries on their own may be mailed by surface only.</td>
</tr>
</tbody>
</table>

- Damaged or recalled batteries and batteries exceeding 100Wh may not be mailed.
- We do not recommend using the US postal service for international shipments.

The UN 38.3 Transportation Tests:
The UN 38.3 Tests are summarized at the end of this document. They must be performed once for each battery of a given design, and must be completed prior to shipment. Although the lithium ion CELL may have passed the UN 38.3 tests, this does not bestow certification for a battery pack which must be separately tested. A new battery must be re-tested if it differs from a previously tested type by:
- A change of more than 0.1 g or 20% by mass, whichever is greater, to the cathode, to the anode, or to the electrolyte; or
- A change that would materially affect the test results.
Untested batteries must be shipped as UN 3480, Class 9, Fully Regulated, Dangerous Goods.

Recommended Reading:
- IATA Lithium Battery Guidance Document. Transport of Lithium Metal and Lithium Ion batteries Revised for the 2013 regulations. Dated 04/10/2012 (or subsequent revisions)
- IATA Dangerous Goods Regulations 54th Edition Effective January 1 2013
- Both are available from www.iata.org

Lithium Ion Handling Labels:
Search for “Lithium ion handling labels” on the internet. Labels can be purchased with blank spaces to identify the contents as Lithium Ion, & for your phone number to be added. You cannot re-use our Li Ion handling labels because your phone number must be used when you ship the products onwards.

Packaging:
If you re-use our shipping boxes it is your responsibility as the shipper to ensure that the boxes are 100% fit for their continuing journey.

Finding a Carrier:
In order to ship Inspired Energy Lithium Ion batteries and to receive ex-works shipments from Inspired Energy you will need a freight account with a shipper who is able to carry class 9 dangerous goods. When making your decision be sure to check the operator variances in the IATA handbook or contact them for their requirements as some carriers require more stringent documentation than the IATA regulations.

Dangerous Goods Certification:
Inspired Energy shipping personnel are certified to the current requirements of IATA Dangerous Goods regulations. If you ship more than 2 Inspired Energy Lithium Ion battery packs in a package on their own, your shipping personnel must be similarly certified. One resource for this is: www.compliancetrainingonline.com
Storage

Inspired Energy Lithium Ion battery packs can be stored from -20°C to +60°C at up to 80% relative humidity. However they are best stored below 21°C in a cool, dry, well-ventilated facility free from corrosive gas or vapor.

Storage at elevated temperatures (Above 45°C) will degrade battery performance and reduce battery life. Storage at low temperatures may affect initial battery performance.

Extended storage may require a calibration cycle or a few regular operating cycles to restore full accuracy to the fuel gauge.

Handling

- Avoid shorting the battery
- Avoid exposing the battery to excessive shock or vibration
- Do not use modified chargers
- Do not use a battery that has been damaged in any way
- Do not immerse the battery in water
- Do not expose the battery to fire
- Do not dispose of the battery in fire
- Do not disassemble or deform the battery
- Keep the battery out of the reach of children
- Always charge in accordance with the manufacturer’s instructions, using specified chargers only

Recycling

Inspired Energy is a member of the Rechargeable Battery Recycling Corporation & all applicable products bear the RBRC symbol which includes the phone number to call to find your closest recycling location. All Inspired Energy Lithium Ion batteries contain recyclable materials and are accepted for recycling by all the RBRC locations throughout North America. We encourage the use of recycling facilities for our products. For more information on recycling:

In North America contact the Rechargeable Battery Recycling Corporation (RBRC) at:
 www.call2recycle.org or phone 1-877-2-RECYCLE (1-877-273-2925)

In Europe contact the European Portable Battery Association (EPBA).
 www.epbaeurope.net
